LOGBLOCK SOCIAL MEDIA SERVICE
UI Prototyping

version 1.0

Based on the Use Case specification, the team has designed the prototype User Interface for LogBlock.
The full design is available at this address: [Figma](#)

In order not to populate this brief with many medias, designs are stored in the attached "ui" folder with feature specific naming scheme.

The User Interface Prototype includes:
- how a post and it's inner elements are expected to be displayed and what interactions can User initiate with them.
- the design of the (Main) News Feed Page, which will displays posts from authors from whom the User has connected to.
- the design of the Exploration Page, featuring top newest posts as well as the search function for User to find other profiles.
- the design of the Profile Page, featuring a single view of a Profile, along with the target profile's biography and posting history.
- models specialized views of Expert and Administration User class, with Administration class having a dedicated Report page and associated actions.
